(Dated: April 26, 2010)

In this supplemental material we present the results of our calculations of the zone-center phonon frequencies, as well as the infrared activities for those modes that are infrared-active, for the compounds considered in the main article.

PACS numbers: 77.22.-d, 77.55.df, 85.50.-n

I. SUPPLEMENT: PHONON PROPERTIES

As stated in the main text, in the frequency range of the lattice vibrations, the dielectric tensor $\epsilon_{\alpha\beta}$ can be decomposed as

$$\epsilon_{\alpha\beta}(\omega) = \epsilon_{\alpha\beta}^{\text{el}} + \epsilon_{\alpha\beta}^{\text{ion}}(\omega), \quad (1)$$

where $\epsilon_{\alpha\beta}^{\text{el}}$ is the purely electronic contribution (assumed to be independent of frequency in this range) and $\epsilon_{\alpha\beta}^{\text{ion}}(\omega)$ is the ionic (or lattice) contribution. The values of the electronic contributions are given in the main text, and also repeated in this Supplement in Table I for completeness.

The ionic contribution can be reconstructed from the information given in Tables II, III and IV using the relation

$$\epsilon_{\alpha\beta}^{\text{ion}}(\omega) = \Omega_0^2 \sum_n \frac{Z_\alpha^{*n} Z_\beta^{*n}}{\omega_n^2 - \omega^2}, \quad (2)$$

where

$$Z_\alpha^{*n} = \sum_{i\beta} \frac{1}{\sqrt{M_i}} Z_{i,\alpha\beta} \zeta_{i\beta}^n \quad (3)$$

is the dimensionless mode dynamical charge and

$$\Omega_0 = \sqrt{\frac{4\pi e^2}{Vm_0}} \quad (4)$$

has units of a plasma frequency. Here ω_n is the phonon frequency, $Z_{i,\alpha\beta}$ is the atomic Born effective-charge tensor, $\zeta_{i\beta}^n$ is the dimensionless eigenvector of the dynamical matrix normalized to unity, M_i is the mass of i -th ion in atomic mass units, e is the electron charge, V is the unit cell volume, and m_0 is the atomic mass unit.

The values of Ω_0 are reported in Table II. The results for the frequencies ω_n and for the activities of the infrared-active modes are presented in Tables III and

IV for simple perovskites and double perovskites respectively. For the infrared-active modes, note that only the non-zero elements of the Z_α^{*n} tensor are reported.

TABLE III: Γ -point phonon frequencies for $Pbnm$ perovskites we considered. Phonon frequencies are given in cm^{-1} . For infrared-active modes, the non-zero values of the dimensionless mode charges Z_α^* are given (see Eq. 3). B_{3u} modes are active along x -axis, B_{2u} along y , and B_{1u} along z .

TABLE IV: Γ -point phonon frequencies for the $\text{La}_2\text{BB}'\text{O}_6$ perovskites considered. Phonon frequencies are given in cm^{-1} . For infrared-active modes, non-zero components of mode charges Z_α^* are given (see Eq. 3). B_u modes are active in x - z plane and A_u modes along y -axis.
