

Tired of changing light bulbs AND want to save money?
Still using 100 year-old technology?

TAKE THE COMPACT FLUORESCENT LIGHT BULB CHALLENGE!

- A 23 W Compact bulb gives the same light as a 100W regular bulb but lasts THIRTEEN times longer! The Compact bulb will save you \$90 just in electricity cost over its lifetime compared to a 100 W bulb.
- Compact bulbs draw less current and burn cooler so your socket does not get hot and electrical wiring around it lasts longer.
- You'll SAVE TIME and MONEY -- install the compacts and forget about changing them for years at a time! (Got any elderly relatives?)

So what are you waiting for? Count up the number of light bulbs in your home and go out and replace them with compact fluorescent bulbs!

Toss 'Em

Most big stores stock them. We bought ours at Costco @ \$2.81 for the "100W" and \$1.72 for the "60W" Compact

Install 'Em

- Fine print: You will also reduce Global Warming pollution. Over its lifetime, a "100W" Compact will prevent global warming pollution equal to 100 to 150 gallons of gasoline AND reduce poisons like mercury in our food chain AND reduce asthma causing nitrous and sulfur oxides from our lungs.
- Real fine print: Don't use with dimmers or if the conditions are extreme. These bulbs contain small quantity of mercury and should be disposed of properly.
- Our sample bulbs are manufactured by FEIT Electric (866-326-BULB). We have not verified manufacturer's claims, but the bulbs are Energy Star certified by the Dept of Energy.
- A project of the NJ Sierra Club. To join, visit <http://newjersey.sierraclub.org/join.html>
