Solid State, 9/20/2017

Outline

- 1 What are heavy fermions
 - What are they
 - Why they're heavy
- 2 Why we care about them
 - Insulators
 - Superconductors
 - Quantum Criticality

Outline

 - Insulators
 - Superconductors
 - Quantum Criticality

- A heavy fermion material is a material with highly correlated electrons
- Kondo effect,

$$\rho(T) = \rho_0 + aT^2 + c_m \ln \frac{\mu}{T} + bT^5 \quad (1)$$

Outline

- 1 What are heavy fermions
 - What are they
 - Why they're heavy
- 2 Why we care about them
 - Insulators
 - Superconductors
 - Quantum Criticality

- Despite being highly correlated, these materials can be described as a fermi liquid.
- Specific Heat

$$C_p = \frac{\pi^2}{2} \frac{k_B}{\epsilon_f} n k_b T \quad (2)$$

-

$$\epsilon_f = \frac{\hbar^2 k_f^2}{2m^*} \quad (3)$$

Outline

- 1 What are heavy fermions
 - What are they
 - Why they're heavy
- 2 Why we care about them
 - Insulators
 - Superconductors
 - Quantum Criticality

- Kondo Insulator, above a certain temperature, the material is metallic and below a certain temperature it becomes insulating.

Outline

- 1 What are heavy fermions
 - What are they
 - Why they're heavy
- 2 Why we care about them
 - Insulators
 - **Superconductors**
 - Quantum Criticality

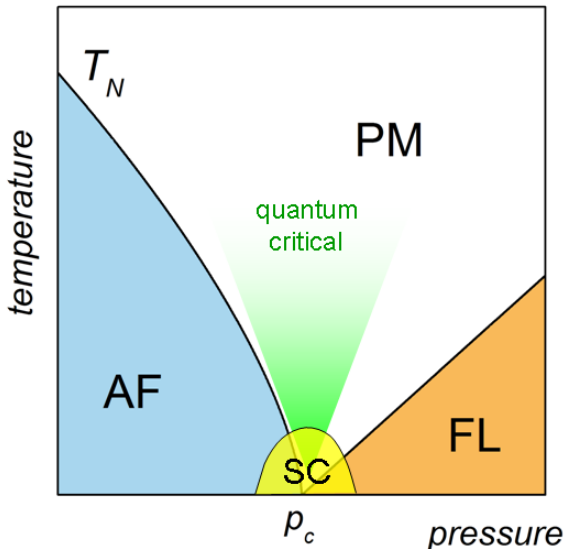

- Normal BCS superconductors form cooper pairs by interacting with the lattice. ie via phonons.
- So metals that have strong interaction with the lattice usually make good superconductors.

- But heavy fermionic materials are too "heavy" to interact with the lattice. Yet we have found at least 30 heavy fermion superconductors.

Outline

- 1 What are heavy fermions
 - What are they
 - Why they're heavy
- 2 Why we care about them
 - Insulators
 - Superconductors
 - Quantum Criticality

- Some heavy fermion materials contain quantum critical points. Example: Antiferromagnetic.

Summary

- Heavy fermions are highly correlated electron systems.
- They follow simple fermi liquid laws which appear to make them heavier.
- They exhibit a barrage of interesting properties that we still don't fully understand.
