

7. There are 16 multiple-choice questions on the exam. Mark only one answer on the answer sheet. There is no deduction of points for an incorrect answer, so even if you can't work out the answer to a question, you should make an educated guess. **At the end of the exam, hand in the answer sheet and the cover page.** Retain this question paper for future reference and study.
8. When you are asked to open the exam, make sure that your hand during the exam if you have a question. This is not the case, and a proctor will help you. Also raise your copy contains all 16 questions. Raise your hand if you have your student ID ready to show to the proctor during the exam.
9. Please SIGN the cover sheet under your name sticker and have your student ID ready to show to the proctor during the exam.

Some possibly useful information:

$$c = \text{speed of light} = 3.00 \times 10^8 \text{ m/s}$$

$$e = \text{electron mass} = 9.11 \times 10^{-31} \text{ kg}$$

$$q_e = -e = \text{charge on an electron} = -1.602 \times 10^{-19} \text{ Coulombs}$$

$$q_p = +e = \text{charge on a proton} = +1.602 \times 10^{-19} \text{ Coulombs}$$

$$k_e = 8.99 \times 10^9 \text{ N} \cdot \text{m}^2/\text{C}^2$$

$$\epsilon_0 = 8.85 \times 10^{-12} \text{ C}^2/\text{N} \cdot \text{m}^2$$

$$\mu_0 = 4\pi \times 10^{-7} \text{ T} \cdot \text{m/A}$$

$$g = 9.80 \text{ m/s}^2$$

$$1 \text{ nC} = 10^{-9} \text{ C}$$

$$1 \mu\text{C} = 10^{-6} \text{ C}$$

$$1 \text{ pC} = 10^{-12} \text{ C}$$

5. Under CODE enter the exam code given above.

4. Enter 227 under COURSE, and your section number (see label above) under SEC.

3. Under STUDENT # enter your 9-digit student ID.

2. In the section labeled NAME (Last, First, M.I.) enter your last name, then fill in the empty circle for a blank, then enter your first name, another blank, and finally your middle initial.

1. The exam will last from 3:00 PM to 4:20 PM. Use a #2 pencil to make entries on the answer sheet. Enter the following ID information now, before the exam starts.

6. During the exam, you may use pensils, a calculator, and one handwritten 8.5 x 11 inch sheet with formulas and notes, without attachments.

1. In the piece of copper wire shown in the figure, a current of $6A$ flows from left to right. The perpendicular cross-section of the wire is S . Which is correct?
- a. Electrons only cross S
b. Electrons cross S in both directions but more cross from left to right.
c. Electrons cross S in both directions but to left than the other way.
d. Electrons in the wire all move to the right with a speed of $0.1\text{ mm per second}.$
e. Electrons cross S in both directions but more cross from left to right than the other way.
2. A thin copper wire of 0.20 mm diameter carries a current of $2A$. Copper has a density of 8.4×10^{28} free electrons per m^3 . What is the drift speed of the electrons?
- a) $6.06 \times 10^3 \text{ m/sec}$
b) $2.1 \times 10^6 \text{ m/sec}$
c) $6.11 \times 10^{-4} \text{ m/sec}$
d) $4.7 \times 10^{-3} \text{ m/sec}$
e) $1.48 \times 10^5 \text{ m/sec}$
3. The wire shown carries a current i . The magnetic field at C is
- a) $\mu_0 i / Ar + \mu_0 i / d$
b) $\mu_0 i / 2Ar$
c) $\mu_0 i / 2r$
d) $\mu_0 i / Ar + 2\mu_0 i / d$
e) $\mu_0 i / Ar$ Correct
4. A circuit consists of a battery (without internal resistance) and a resistor whose resistance is R . The power dissipated in a second resistor whose resistance is also R is now connected across the battery.
- a) $4P$
b) P
c) $P/4$
d) $2P$
e) $P/2$ Correct
5. A proton (charge $= +e$, mass $= m_p$) and a deuteron (charge $= +e$, mass $\approx 2m_p$) have the same kinetic energy. They enter a magnetic field, and both move in circular paths. How are the radii of the paths related?
- a) $r_d = 2r_p$
b) $r_d = \sqrt{2}r_p$ Correct
c) $r_d = r_p$
d) $r_d = r_p/\sqrt{2}$
e) $r_d = r_p/2$
6. A proton is travelling in the negative y -direction. It enters a uniform magnetic field pointing in the positive y -direction. It follows a circular path of radius r_d . A deuteron is travelling in the negative x -direction. It follows a circular path of radius r_d . The ratio of the deuterons mass to that of the proton is
- a) $2r_p$
b) $\sqrt{2}r_p$ Correct
c) r_p
d) $r_p/\sqrt{2}$
e) $r_p/2$

-
- The diagram shows a wire with a circular cross-section of radius r . The wire has a thickness d and carries a current I . The magnetic field at a point C located at a distance r from the center of the circle is given by the formula $B = \mu_0 I / 2r$.
7. The figure shows a coordinate system with a magnetic field \mathbf{B} pointing in the negative z -direction. A proton moves along the path shown. The direction of motion of the proton is
- a) Positive x -direction
b) Positive y -direction
c) Negative y -direction
d) Negative z -direction
e) Positive z -direction
8. A proton is in the positive z -direction. It enters a uniform magnetic field pointing in the positive z -direction. It follows a circular path of radius r_d . A deuteron is in the positive x -direction. It follows a circular path of radius r_d . The ratio of the deuterons mass to that of the proton is
- a) $2r_p$
b) $\sqrt{2}r_p$ Correct
c) r_p
d) $r_p/\sqrt{2}$
e) $r_p/2$
9. A proton is in the positive z -direction. It enters a uniform magnetic field pointing in the positive y -direction. It follows a circular path of radius r_d . A deuteron is in the positive x -direction. It follows a circular path of radius r_d . The ratio of the deuterons mass to that of the proton is
- a) $2r_p$
b) $\sqrt{2}r_p$
c) r_p
d) $r_p/\sqrt{2}$
e) $r_p/2$

9.

a piece of gold wire is 0.5 V/m , what is the current density?

- a) $(2.0 \times 10^7) \text{ A/m}^2$ **Correct**
 b) $(1.2 \times 10^{-8}) \text{ A/m}^2$
 c) $(4.9 \times 10^{-8}) \text{ A/m}^2$
 d) $(8.2 \times 10^7) \text{ A/m}^2$
 e) $(3.2 \times 10^3) \text{ A/m}^2$

Gold has a resistivity of $2.44 \times 10^{-8} \Omega \cdot \text{m}$. If the electric field in a piece of gold wire is 0.5 V/m , what is the current density?

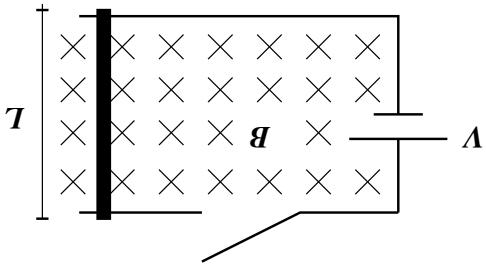

12.

- A resistance of $1 \text{ M}\Omega$ is in series with a $1 \mu\text{F}$ capacitor, a switch and a 200 V power-supply. The capacitor is uncharged, and the switch is suddenly closed. What will the current through the resistor be three seconds later?
- a) $9.95 \mu\text{A}$ **Correct**
 b) $190.43 \mu\text{A}$
 c) $0.2 \mu\text{A}$
 d) $25 \mu\text{A}$
 e) Essentially zero

- a) 120 C
 b) 360 C
 c) 3000 C
 d) 2400 C
 e) 1800 C **Correct**

charge passing through it in one hour is:

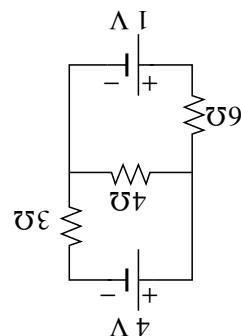

11. A 60-watt light bulb carries a current of 0.5 ampere . The total

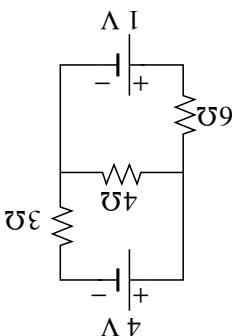

- a) 4.5 m/s^2 to the left
 b) 4.5 m/s^2 to the right
 c) 0 m/s^2
 d) 450 m/s^2 to the left
 e) 450 m/s^2 to the right

the bar (neglecting gravity)?

10. A metal bar of mass 1 kg , length $L = 50 \text{ cm}$, and resistance $R = 0.1 \Omega$ is lying across two wires as shown. When the switch is closed, the circuit is completed and the 9-Volt battery causes current to flow through the bar. If there is a magnetic field $B = 0.1 \text{ T}$ pointing into the page, what is the acceleration of the bar (neglecting gravity)?

8. What is the current through the 4Ω resistor?

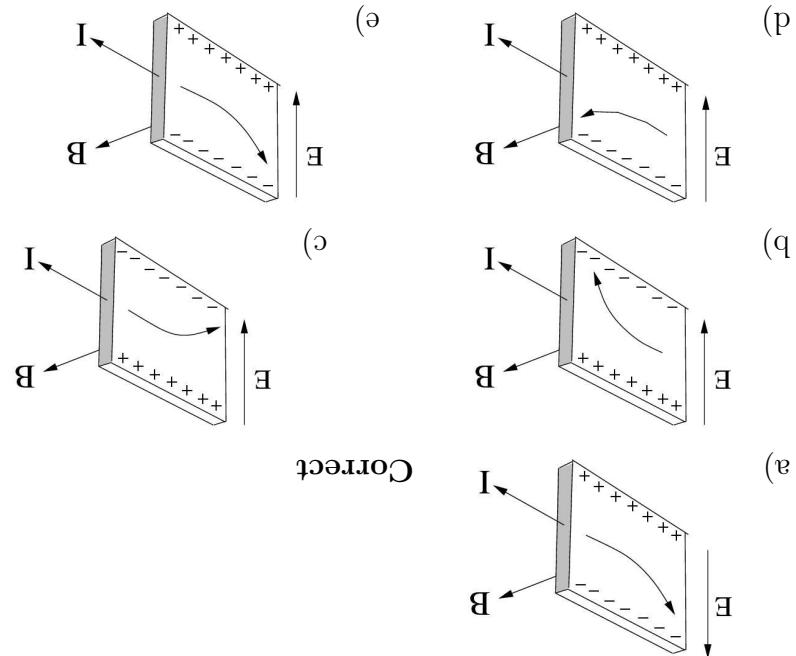

- a) 0.125 A
 b) 1.25 A
 c) 1 A
 d) 0.75 A
 e) 0.5 A **Correct**

What is the current through the 4Ω resistor?

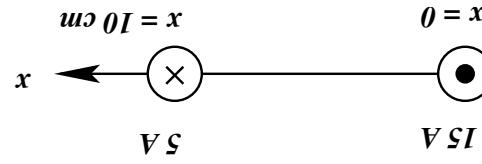

- a) 0.001 T **Correct**
 b) 0 T
 c) 0.002 T
 d) $5 \times 10^{-4} \text{ T}$
 e) 10^{-6} T

7. A copper wire of radius 1 mm carries a current of 10 A . What is the magnetic field inside the wire, at a distance 0.5 mm from the axis of the wire?

15. A current passes through a conductor at right angles to an applied magnetic field B . If the carriers are negatively charged, which of the figures below correctly represents the deflection of the carriers and the generation of an electric field E ?

4. Two very long parallel wires are positioned at $x = 0$ and $x = +10$ cm. Current $I = 15$ A is carrying 5 A of current out of the paper, while the wire at $x = 0$ is carrying 15 A of current into the paper. At what point along the x axis is the current B equal to zero (other than $x = \pm\infty$)?
- (a) $+5$ cm
 (b) $+7.5$ cm
 (c) $+15$ cm
 (d) $+25$ cm
 (e) no solution other than $\pm\infty$

3. A static magnetic field CANNOT:
- (a) change the kinetic energy of a charge
 (b) accelerate a charge
 (c) change the momentum of a charge
 (d) exert a force on a charge
 (e) exist

- of the carriers and the generation of an electric field E ?
 15. A current passes through a conductor at right angles to an applied magnetic field B . If the carriers are negatively charged, which of the figures below correctly represents the deflection of the carriers and the generation of an electric field E ?
- (a) Labeled 'Correct', it shows carriers moving to the left, creating an electric field E pointing downwards.
 (b) Shows carriers moving to the right, creating an electric field E pointing upwards.
 (c) Shows carriers moving to the left, creating an electric field E pointing upwards.
 (d) Shows carriers moving to the right, creating an electric field E pointing downwards.
 (e) Shows carriers moving to the right, creating an electric field E pointing upwards.
