## 6. Forces and Motion II

- Dynamics of uniform circular motion

Centripetal acceleration:

$$\vec{a} = -\frac{v^2}{r}\hat{r}$$

$r$  = radius of the circle

$v$  = speed

$\hat{r} = \frac{\vec{r}}{r}$  **unit** radial vector

## Newton's 2nd law:

$$\vec{F}_{\text{net}} = m\vec{a}$$

$$\vec{F}_{\text{net}} = -\frac{mv^2}{r}\hat{r}$$

## Centripetal Force

**A centripetal force accelerates a body by changing the direction of the body's velocity without changing the body's speed.**

A ball attached to a string whirls in a circle on a frictionless surface.

No net force now acts on the ball, so it obeys Newton's first law—it moves in a straight line at constant velocity.

- ball attached to a string in uniform circular motion on a horizontal frictionless plane

$$\vec{F}_{\text{net}} = \vec{T} \quad (\text{tension})$$

- the string breaks  $\Rightarrow$  uniform **linear** motion, according to Newton's 1st law.

- no  $\vec{T} \Rightarrow$  no centripetal force  $\Rightarrow \vec{a} = 0$

## i-Clicker

A ball attached to a string rotates in a vertical plane near Earth's surface such that the string is stretched taut all points on the circular path. What is the minimum value of its speed at the highest point  $A$  of the trajectory.

A)  $v_{\min} = 0$

B)  $v_{\min} = \sqrt{rg}$

C)  $v_{\min} = \sqrt{rg/2}$

D)  $v_{\min} = \sqrt{2gr}$

E) none of the above

## Answer

A ball attached to a string rotates in a vertical plane near Earth's surface. For a point  $P$  on the trajectory, let  $T_P$  denote the magnitude of the tension in the string. Which of the following statements is true?

A)  $v_{\min} = 0$

B)  $v_{\min} = \sqrt{rg}$

C)  $v_{\min} = \sqrt{rg/2}$

D)  $v_{\min} = \sqrt{2gr}$

E) none of the above

$$\vec{F}_{\text{net}} = -\frac{mv^2}{r}\hat{r} \quad \vec{F}_{\text{net}} = \vec{F}_g + \vec{T}$$

$$(F_{\text{net}})_y = -(mg + T) = -\frac{mv^2}{r}$$

$$T = \frac{mv^2}{r} - mg \geq 0$$

$$v^2 \geq rg \Rightarrow v_{\text{min}} = \sqrt{rg}$$

[Home Page](#)[Title Page](#)[<<](#)[>>](#)[<](#)[>](#)[Page 8 of 35](#)[Go Back](#)[Full Screen](#)[Close](#)[Quit](#)

- **Example:** A ball attached to a string of length  $l$ , which makes an angle  $\theta$  with the vertical, rotates uniformly in a horizontal plane as shown below. Find the speed  $v$ .

$$\vec{F}_{\text{net}} = m\vec{a} \qquad \vec{F}_{\text{net}} = \vec{F}_g + \vec{T}$$

$$(F_{\text{net}})_x = T \sin \theta$$

$$(F_{\text{net}})_y = -mg + T \cos \theta$$

$$a_x = v^2/r \qquad a_y = 0$$

$$T \sin \theta = \frac{mv^2}{r} = \frac{mv^2}{l \sin \theta}$$

$$T \cos \theta - mg = 0$$

$$\frac{v^2}{lg \sin \theta} = \tan \theta \Rightarrow v = \sin \theta \sqrt{\frac{lg}{\cos \theta}}$$

● **Example:** a car of mass  $m$  moving with constant speed makes a turn of radius  $r$ . Suppose the static friction coefficient between the wheels and the road is  $\mu_s$ . Find the maximum value of the speed  $v$  such that the car will remain on the road.

$$\vec{F}_{\text{net}} = m\vec{a} \quad \vec{a} = -\frac{mv^2}{r}\hat{i}$$

$$F_N - mg = ma_y = 0$$

$$-f_s = ma_x = -\frac{mv^2}{r}$$

$$f_s \leq \mu_s F_N \Rightarrow \frac{mv^2}{r} \leq \mu_s mg$$

$$v \leq \sqrt{\mu_s rg}$$

## 7. Kinetic energy and work

- **What is energy?**
  - **Basic Idea:** scalar quantity which quantifies the state of motion and/or the capacity for motion of a system
  - **Conserved** as the state of motion of the system changes.

Energy {

- Kinetic energy : associated to motion
- Potential energy : associated to the capacity of generating motion

- **Example:** freely falling ball from height  $h$ .

- initial speed:  $v_0 = 0$
- final speed:

$$v^2 = v_0^2 + 2gh = 2gh$$

- initially: **potential energy:**  $mgh$
- finally: **kinetic energy:**  $mv^2/2$
- **Energy conservation:**

$$mgh = \frac{mv^2}{2}$$

- **Kinetic Energy:** energy associated to the motion of an object

$$K = \frac{1}{2}mv^2$$

**Unit:** Joule

$$1\text{J} = 1\text{kg} \times \text{m}^2/\text{s}^2$$

## How do we calculate the work of a force?

- **Example:** bead on frictionless rod subject to constant force  $\vec{F}$

Newton's 2nd law:

$$F_x = ma_x$$

Constant acceleration model:

$$v_x^2 = v_{0x}^2 + 2a_x \Delta x$$

$$\frac{mv^2}{2} - \frac{mv_0^2}{2} = F_x \Delta x$$

- Work done by the force  $\vec{F}$

$$F d \cos \phi = \vec{F} \cdot \vec{d}$$

$$\vec{d} = (\Delta x) \hat{i}$$

displacement vector

$$F d \cos \phi \begin{cases} > 0, \text{ for } 0 \leq \phi < \pi/2 & \text{positive work, } K_f > K_i \\ = 0, \text{ for } \phi = \pi/2 & \text{zero work, } K_f = K_i \\ < 0, \text{ for } \pi/2 < \phi \leq \pi & \text{negative work, } K_f < K_i \end{cases}$$

- **Net work:**

When two or more forces act on an object, the **net work** done on the object is the sum of the works done by the individual forces.

$$W_{\text{net}} = \sum W = \sum \vec{F} \cdot \vec{d} = \left( \sum \vec{F} \right) \cdot \vec{d} = \vec{F}_{\text{net}} \cdot \vec{d}$$

[Home Page](#)[Title Page](#)[◀◀](#)[▶▶](#)[◀](#)[▶](#)[Page 22 of 35](#)[Go Back](#)[Full Screen](#)[Close](#)[Quit](#)

- **Work-Kinetic Energy Theorem**

$$\left( \begin{array}{c} \text{change in the kinetic} \\ \text{energy of a particle} \end{array} \right) = \left( \begin{array}{c} \text{net work done on} \\ \text{the particle} \end{array} \right).$$

$$\Delta K = W \qquad K_f = K_i + W$$

## i-Clicker

A ball of mass  $m$  attached to string is launched with initial speed  $v_0$  on a circular trajectory on horizontal plane. The friction force between the ball and the surface has constant magnitude  $f_k$ . What is the speed of the ball after travelling a distance  $s$  along the circle.

A)  $v = v_0$

B)  $v = \sqrt{v_0^2 - \frac{2f_k s}{m}}$

C)  $v = v_0 - \frac{f_k s}{mv_0}$

D) cannot be determined from the data.

## Answer

A ball of mass  $m$  attached to string is launched with initial speed  $v_0$  on a circular trajectory on horizontal plane. The friction force between the ball and the surface has constant magnitude  $f_k$ . What is the speed of the ball after travelling a distance  $s$  along the circle.

A)  $v = v_0$

B)  $v = \sqrt{v_0^2 - \frac{2f_k s}{m}}$

C)  $v = v_0 - \frac{f_k s}{mv_0}$

D) cannot be determined from the data.

Infinitesimal displacement

$$\vec{ds} = \vec{v}dt$$

Note that  $\vec{T} \perp \vec{ds}$  while  $\vec{f}_k$  makes an angle  $\theta = 180^\circ$  with  $\vec{ds}$ .

Infinitesimal work:

$$dW_{f_k} = \vec{f}_k \cdot \vec{ds} = -f_k ds$$

Total work:

$$W = \int dW = -f_k s$$

Work-energy theorem:

$$\frac{mv^2}{2} - \frac{mv_0^2}{2} = -f_k s$$
$$v = \sqrt{v_0^2 - \frac{2f_k s}{m}}$$

[Home Page](#)[Title Page](#)[<<](#)[>>](#)[<](#)[>](#)[Page 28 of 35](#)[Go Back](#)[Full Screen](#)[Close](#)[Quit](#)

- Work done by the gravitational force

Freely falling object moving downwards:

$$W = \vec{F}_g \cdot \vec{d} = mgd \cos 0^\circ = mgd > 0$$

$$K_1 = \frac{mv_1^2}{2} \quad K_2 = \frac{mv_2^2}{2}$$

$$K_2 - K_1 = mgd > 0$$

Freely falling object moving upwards:

$$W = \vec{F}_g \cdot \vec{d} = mgd \cos 180^\circ = -mgd < 0$$

$$K_1 = \frac{mv_1^2}{2} \quad K_2 = \frac{mv_2^2}{2}$$

$$K_2 - K_1 = -mgd < 0$$
